

Year 5 Individual Pupil Science Assessment Record

Name		Teacher	Class		
Pupil I think I can...	Working Scientifically	Teachers			
		Working towards	Achieved	Exceeded	
	Plan different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary.				
	Take measurements, using a range of scientific equipment, with increasing accuracy, taking repeat readings when appropriate.				
	Record data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs.				
	Use test results to make predictions to set up further comparative and fair tests.				
	Report and present findings from enquiries in oral and written forms such as displays and other presentations. This includes drawing conclusions, and explaining how things happen and how far I trust the results found.				
	Identify scientific evidence that has been used to support or refute ideas or arguments.				
	Living things and their habitats				
	Describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird.				
	Describe the life process of reproduction in some plants and animals.				
	Animals including humans				
	Describe the changes as humans develop to old age.				
	Properties and change of materials				
	Compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets.				
	Understand that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution.				
	Use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating.				
	Give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic.				
	Demonstrate that dissolving, mixing and changes of state are reversible changes.				
	Explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda.				
	Earth and space				
	Describe the movement of the Earth, and other planets, relative to the Sun in the solar system.				
	Describe the movement of the Moon relative to the Earth.				
	Describe the Sun, Earth and Moon as approximately spherical bodies.				
	Use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky.				

	Forces			
	Explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object.			
	Identify the effects of air resistance, water resistance and friction that act between moving surfaces.			
	Recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect.
